

WHAT WE TREAT

- ◆ **Peripheral Artery Disease (PAD):** Peripheral Artery Disease is a very common medical condition in which a build-up of plaque due to atherosclerosis makes it difficult for blood to circulate through the arteries.
- ◆ **Carotid Artery Disease:** Carotid artery disease occurs when there is a build-up of plaque in the carotid arteries, which supply blood and oxygen to the brain. Carotid artery disease is a major risk factor for both strokes and mini-strokes, also known as transient ischemic attacks (TIA).
- ◆ **Aortic Aneurysm:** An aneurysm is a weak, bulging area in an artery. If it occurs in the abdominal aorta, the large artery that travels from the heart to the chest and abdomen, it can be a serious health hazard. Blood clots can also form as a result of an abdominal aortic aneurysm. The clots can block the blood from reaching the muscles, tissues and organs, causing pain and numbness, as well as the potential for permanent tissue damage and limb amputation.
- ◆ **Varicose Veins:** Varicose veins are enlarged blue, red or flesh-colored veins that look like raised, twisted, rope-like cords on the legs. Over time, varicose veins can lead to chronic venous insufficiency (CVI), a more serious condition, in which it becomes increasingly harder for the leg veins to pump blood back to the heart.

COMPREHENSIVE VASCULAR SERVICES:

- ⊕ ABI + Doppler Diagnostic Testing
- ⊕ Angioplasty and Stenting
- ⊕ Laser Atherectomy
- ⊕ Radiofrequency Ablation of Saphenous Veins
- ⊕ Phlebectomy
- ⊕ Sclerotherapy
- ⊕ High Ligation and Stripping of Varicose Veins
- Ⓜ Carotid Endarterectomy
- Ⓜ Carotid Stent Placement
- Ⓜ Bypass Grafts
- Ⓜ Abdominal Aortic Aneurysm (AAA) Repair

Learn more about each condition, including treatment options, at lamvascular.com.
